

Colasoft and Internetwork Defense Announces Training Partnership

Chengdu, China (September 20, 2011) – Colasoft, the leading provider of innovative network analysis solutions, and Internetwork Defense, a premier security training company, today announced their training partnership to provide first class product trainings for IT professionals, this announcement marks Internetwork Defense as Colasoft's first training partner.

Colasoft provides its flagship product Capsa Network Analyzer to Internetwork Defense as one of their key instructional tools in their training classes. "we are very honored to have Internetwork Defense as our first training partner since we started this program," said Ocean Yu, Vice President at Colasoft, "We believe this partnership will soon deliver first-class trainings of Capsa Network Analyzer to thousands of IT professionals so as to help them develop professional skills as well as deal with daily work."

"We have been helping people monitor networks for performance and security issues since our inception. Colasoft Capsa Network Analyzer is a "Swiss Army Knife" for network professionals, integrating packet analysis, statistics gathering and intrusion detection," said Larry Greenblatt, Jedi Knight for Internetwork Defense, "It is with great pleasure, that we were able to make this agreement to assist our clients in their needs"

About Internetwork Defense

Internetwork Defense is a premier security training company, specializing in the development of administrative policies and procedures as well as technical skill development of the essential tools a penetration tester needs in their tools box. Our training includes hands on use of NMAP, Wireshark, Metasploit, Nessus, Cain and Able, Snort, Burp Suite and ColaSoft Capsa Network Analyzer to name a few. IND has taught hundreds of Military and DoD personnel how to effectively use these tools for Network Self Defense. IND utilizes unique virtual environments in both local and cloud based networks, with a tutorial based lesson plan to learn and understand the simple to complex features of these tools.
